Strategic Intelligence for SAP S/4HANA and SAP Datasphere

Spot supplier, competitor, and market changes and identify affected SAP S/4HANA orders

Teams often hear about disruptions from headlines without knowing which orders are at risk. Strategic Intelligence links each relevant change to its sources and to the suppliers, purchase orders, and spend in SAP S/4HANA it affects.

How it works

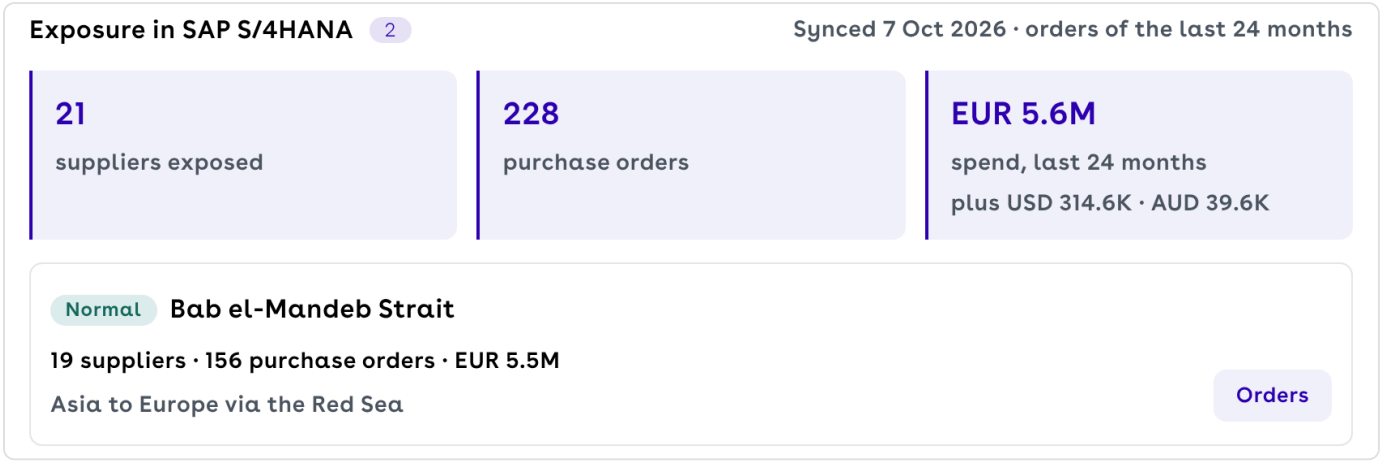

01
Monitor
Vessel traffic at 28 chokepoints, news in 100+ languages, trade media, and regulation, twice a day.

02
Rank
A deterministic ranking scores each disruption. Every number links to its sources.

03
Join to SAP S/4HANA
Suppliers, purchase orders, and sales orders are read through standard OData APIs.

04
Deliver
Signals by email, in Microsoft Teams, and in the web app. Exposure lands in SAP Datasphere.

Example: one disruption, traced to orders

Supply chain tab with the SAP S/4HANA layer. Demonstration with the public SAP S/4HANA sandbox, signal snapshot of 7 October 2026.

Benefits

- **Protect deliveries before disruption impacts operations.** See exposed suppliers, orders, and spend instead of a headline.
- **Identify changes early.** Strategy, sales, and purchasing teams learn about relevant changes without manual searching.
- **Base decisions on sources you can check.** Each signal explains why a change matters and links to its sources.

SAP integration

- **SAP S/4HANA:** business partners, suppliers, purchase orders, and sales orders through standard OData APIs.
- **SAP Datasphere:** a supplier exposure data product keyed by SAP supplier number, loaded by a data flow into a governed table.
- **Analytics:** ready for reports, joins, and alerts, for example in SAP Analytics Cloud.
